

Bluetron

The Bluetron range represents a group of powerful jet pumps capable of good suction lift while sustaining excellent pressure. The pump system will automatically sense when you have opened a tap connected to the pressure system and will automatically start the pump, and also, shut the pump down when the tap is closed. The great benefit of this system is that they deliver constant pressure, with no pressure fluctuations, all of the time.

The **BlueTron 100** is a sound performer suited for smaller homes, water transfer and sprinkler applications. For medium sized homes the **BlueTron 120** delivers great pressure with plenty of flow.

BlueTron's are equipped with loss-of-prime protection to protect the pump if your rain water tank runs out of water.

Silent Pumps

There are two ways of having a silent pressure system. One way is to have a submersible pump inside the tank like the ClayTech **RainSub 45**. The second is to have the proven ClayTech **SilentPump**. The problem of being woken in the night by a noisy pressure system will never happen again after you have either of these pumps installed.

The ClayTech **SilentPump** is a multistage pump having its motor cooled by water. This means that there is no fan or motor noise coming from the pump. Because the pump produces such little noise (noise emission < 54 (db)) it can be installed under the house or even near your bedroom window. The **SilentPump** has a built-in constant flow switch giving you pressure as soon as you turn on the tap. It also has flow indication on top of the pump.

The ClayTech **RainSub 45** is a submersible pump that can be installed inside the rain-water tank. It is not automatic, however it can be made so with the addition of a ClayTech **Hydrotronic** external to the rain-water tank.

Inox 240H

This stainless steel multi stage Constant Pressure System will maintain excellent flow and pressure effortlessly for large and medium size homes, at minimal running costs. The pump system senses when a tap is opened and will automatically start the pump, and shut the pump down when the tap is closed. The great benefit of this system is that they deliver constant pressure, with no pressure fluctuations, all of the time. The ClayTech Inox 240 is equipped with a safety system to prevent damage to the unit in the event of losing prime.
